WE ARE HIRING A FULL STACK SENIOR SOFTWARE ENGINEER

Company Information:

Lipa Later is a buy now, pay later platform that allows consumers to shop and pay for items in monthly installments. Lipa Later is a Pan-African organization with presence across Kenya, Uganda, Rwanda and Nigeria - with plans of opening new markets in the near future. The company is growing quickly, and as such, we are looking to recruit and onboard a team of industry leaders with a hustler mentality, ambition and desire to rapidly build a Pan African business. This position is based in Kenya.

About the Role

Being a Full Stack Sr. software engineer of our team, you will work with our technical team through exciting challenges and opportunities that come with a BNPL product. We work in an agile and highly collaborative environment and challenge the norms of traditional business leadership. We are looking for an enthusiastic and experienced engineer able to own aspects of the Larger technical infrastructure and assist in the development of the team. If you have excellent programming skills, a passion for developing/improving applications utilizing cutting edge technologies, and strong leadership skills, then we would like to meet you.

Reports to: Tech Lead

Responsibilities:

- Help define and lead the technical roadmap.
- Directly contribute to core design and write code. Serve as a role model for how great software should be written for the whole company.
- Ensure our infrastructure is safely extensible, scalable, reliable and meets SLAs for both external and internal users.
- Shape future proof interfaces that are easy to build against and meet the requirements of product teams.
- Run, design, and code review

Skills and Qualifications

- 4+ years of experience in architecting and designing large-scale and complex systems that delivered critical impact to a well-known business.
- Have rich experience in driving, executing, and delivering high quality technical solutions.
- Are skilled in gathering and effectively synthesizing users' feedback and experience with platforms and product offerings.
- Are skilled in working across engineering teams and other functions in building alignment, driving decision making, and communicating transparently.
- Expert in backend development using Ruby on Rails. Knowledge of Java Spring boot is a plus.
- Solid administration experience with AWS Cloud Services

Bonus qualities

- Experience using AWS cloud and its resources/services
- AWS certificates
- Strong work experience in Relational Databases including PostgreSQL
- Previous experience in automated testing tools including unit testing & UI testing
- Strong knowledge in DevOps, CI/CD, Docker containers
- Experience with Scrum/Agile Development methodologies
- Experience managing multiple projects at the same time

If you believe you can clearly demonstrate your abilities to meet the relevant criteria for the role, please submit your application quoting in the subject line the Job Title **"FULL STACK SENIOR SOFTWARE ENGINEER"** and attach a detailed CV with correct e-mail address and telephone contacts.
