

MEDICINE E-MCQS

S.NO	Submit Date	Name	course	campus	Total Marks (61)	Result	1. gender	2. a 20 year old women presents with sudden onset weakness of the right side of the body with normal speech. The most likely site of the location is?	3. which one of the following statements is true regarding characteristics of x- linked recessive disorders	4. Which one of the following drugs used in the treatment of tuberculosis is correctly matched with its expected adverse reaction	5. all of the following diseases are classified as spondyloarthropathies EXCEPT?	6. A 25-year old man present with a 4-month history of swellings on the left lower neck and generalized pruritus. examination reveals mobile non-tender rubbery lymph nodes, lymph node biopsy shows features of nodule sclerosis Hodgkin's disease. bone marrow confirms marrow infiltration and computerised tomography scan of the chest abdomen and pelvic are normal what is the stage of the disease.	7. in a patient with anarsaca, 24 hour albumin excretion of 8g and normal glomerular filtration, The following complications are expected EXCEPT.	8. A 60. year old presents to his doctor for a medical check. He is found to have a random blood sugar (RBS) of 7mmol/L. An oral glucose tolerance test (OGTT)done showed fasting blood glucose of 6.2 mmol/L. 2 hour post glucose load of 14.4 mmol/L. Which of the following statements is TRUE regarding this patient?	9. A 22 year old man present to the emergency department with a 3-day history of fever cough and pleuritic chest pain, his temperature is 39° Celsius plus pulse rate is 110 beats per minute and respiratory rate is 26 beats per minute chest radiography reviews an opacity in the right lower lung zone which of the following is the most common cause of the condition.	10. A 12 year old boy develop margarito rejoined pen involving large joints two weeks after a sore throat yesterday of 110 beats per minute and a systolic murmur at the efforts which of the following statement is False concerning is clinical presentation?	11. A 20 year old man presents with 3 months history of bloody mucoid diarrhea colonoscopy shows diffuse erythema and ulcerations in the entire colon and patchy ulceration in the terminal ileum. The MOST likely diagnosis is	Answer Sheet Link
