

## ORTHOPEDICS MCQS

S.NO	Submit Date	Name	CAMPUS	COURSE	Total Marks (55)	Result	1. GENDER	2. A patient sustains a posterior dislocation of the hip, which is reduced by closed reduction. When he recovers from the anaesthetic he has foot drop and numbness in the foot. The most likely cause is:	3. What is the main action on the hip of gluteus medius and gluteus minimus?	4. Gluteus medius and minimus are innervated by:	5. Which muscle inserts into the lesser trochanter?	6. The quadriceps is innervated by:	7. Which of these muscles has an intra-articular insertion?	8. A medical student falls whilst skiing and his bindings fail to release. He feels a sudden pop in his left knee and is unable to continue. Within an hour there is large amount of swelling. On returning to the UK, examination reveals a positive anterior drawer test. The knee is stable to varus and valgus stress. X-rays are normal. The most likely injury is	9. A medical student falls whilst skiing and his bindings fail to release. He feels a sudden pop in his left knee and is unable to continue. Within an hour there is large amount of swelling. On returning to the UK, examination reveals a positive anterior drawer test. The knee is stable to varus and valgus stress. X-rays are normal. The most likely injury is	10. A rugby player is tackled hard from the left side. His opponent strikes the lateral side of his left knee, whilst his boots remain planted in the ground. He feels a sudden pain in the knee, which buckles beneath him. He is able to continue the game, but the knee is painful. There is minimal swelling. Examination reveals pain and laxity on valgus stress. Anterior and posterior drawer tests are negative. The most likely diagnosis is:	Answer Sheet Link
