Add individual feedback

✓ Define what is meant by the term "therapeutic communication" and explain why it is essential in midwifery. \* 5 / 5

- It is important for a midwife to have good rapport with her patient, after many conversations, they have a professional friendship and the physical touch of the midwife has therapeutic value.
- It is an interactive process between a midwife and a woman to fulfill the woman's needs. It promotes understanding and is aimed at being therapeutic for the woman and developmental in relation to the therapeutic relationship. ✓
- The midwife must ask open ended questions, be non judgmental, and empathetic. The woman will develop a sense of trust with the midwife if she feels that the midwife is empathetic to her emotions.
- The midwife must strive to find a balance between the medical and legal requirements of the clinical setting and the wants and needs of the mother. As an advocate for the woman, she will listen, display empathy and take the family's concerns into consideration when delivering care.

Add individual feedback

✓ Which of the following is a barrier to effective communication: \* 5 / 5

- Sitting at eye level with the client.
- Using clarifying statements.
- Using terms of endearment. ✓
