

# Differential Diagnosis of Acute Abdominal Pain

Cause grouping	Differentials	Classical history	Classic examination findings	Investigation findings (initial test, diagnostic test)	Definitive management (remember ABCDE first)
Surgical	Peritonitis <ul style="list-style-type: none"> <li>↳ Peptic ulcer</li> <li>↳ Tumour</li> <li>↳ Gallbladder</li> <li>↳ Appendix</li> <li>↳ Spleen</li> <li>↳ AAA</li> <li>↳ Ectopic</li> <li>↳ SBP</li> </ul>	• Severe generalised abdominal pain	<ul style="list-style-type: none"> <li>• Shock</li> <li>• No abdominal movement with respiration</li> <li>• Guarding</li> <li>• Firm, peritonitic abdomen</li> <li>• Rebound tenderness</li> <li>• Severe pain to light palpation</li> <li>• Percussion tenderness</li> </ul>	<ul style="list-style-type: none"> <li>• <u>Erect CXR</u>: air under diaphragm</li> <li>• <u>CT abdo/pelvis</u>: reveal cause</li> </ul>	• Urgent laparotomy & repair
	Ruptured AAA	<ul style="list-style-type: none"> <li>• Elderly</li> <li>• Severe generalised abdominal pain</li> <li>• Back pain</li> <li>• Reduced GCS/collapse</li> </ul>	<ul style="list-style-type: none"> <li>• Shock</li> <li>• Peritonitis</li> <li>• Expansile mass</li> </ul>	<ul style="list-style-type: none"> <li>• USS abdomen if freely available</li> <li>• CT only if stable</li> <li>• Don't delay theatre</li> </ul>	<ul style="list-style-type: none"> <li>• Aim for permissive hypotension (SBP~100)</li> <li>• Activate 'massive haemorrhage protocol' e.g. 10U</li> <li>• Urgent open repair (/ EVAR if stable)</li> </ul>
	Appendicitis	<ul style="list-style-type: none"> <li>• Young patient</li> <li>• Perumbilical pain initially</li> <li>• Moves to RIF</li> <li>• Anorexia, nausea</li> </ul>	<ul style="list-style-type: none"> <li>• Tender RIF</li> <li>• Worse at McBurney's point</li> <li>• Guarding/local peritonitis</li> <li>• Rovsing's +ve</li> </ul>	<i>Clinical diagnosis</i> <ul style="list-style-type: none"> <li>• USS abdo/pelvis if gynae differentials</li> <li>• Inflammatory markers: raised</li> <li>• Urine BHCG: rule out ectopic</li> </ul>	• Appendicectomy
	Gallstones	<u>Biliary colic</u> <ul style="list-style-type: none"> <li>• Intermittent RUQ pain</li> <li>• Exacerbated by fatty food</li> </ul> <u>Cholecystitis</u> <ul style="list-style-type: none"> <li>• Continuous RUQ pain</li> <li>• Murphy's +ve</li> <li>• Tender + guarding RUQ</li> </ul> <u>CBD stones</u> <ul style="list-style-type: none"> <li>• Jaundice</li> <li>• RUQ pain</li> </ul> <u>Cholangitis</u> <ul style="list-style-type: none"> <li>• Jaundice</li> <li>• Fever/rigors</li> <li>• RUQ pain</li> </ul> <u>Acute pancreatitis</u> <p>(See column)</p>		<ul style="list-style-type: none"> <li>• LFTs: obstructive picture if CBD stones/cholangitis</li> <li>• Inflammatory markers: raised in cholecystitis/cholangitis</li> <li>• <u>Abdominal USS</u></li> </ul>	<u>Biliary colic</u> <ul style="list-style-type: none"> <li>• Analgesia</li> <li>• OPT Cholecystectomy</li> </ul> <u>Cholecystitis</u> <ul style="list-style-type: none"> <li>• Antibiotics (ciprofloxacin or cephalosporin)</li> <li>• Cholecystectomy (hot/6w)</li> </ul> <u>CBD stone</u> <ul style="list-style-type: none"> <li>• Continuous IVI (prevent hepato-renal syndrome)</li> <li>• ERCP</li> </ul> <u>Cholangitis</u> <ul style="list-style-type: none"> <li>• IV antibiotics (e.g. cipro/tazocin)</li> <li>• Treat cause</li> </ul>
	Acute pancreatitis	<ul style="list-style-type: none"> <li>• Severe epigastric/central pain</li> <li>• Radiating to back</li> <li>• Relieved by sitting forwards</li> <li>• Vomiting</li> <li>• History of possible cause e.g. gallstones, alcohol, trauma, surgery, medications etc</li> </ul>	<ul style="list-style-type: none"> <li>• Epigastric tenderness</li> <li>• Tachycardia</li> <li>• Fever</li> <li>• Shock</li> <li>• Jaundice</li> <li>• Grey-Turner's and Cullen's signs (rare)</li> </ul>	<i>Clinical diagnosis</i> <ul style="list-style-type: none"> <li>• <u>Amylase</u> or <u>lipase</u>: raised</li> <li>• LFTs: deranged</li> <li>• CT abdo if diagnostic uncertainty</li> <li>• Apache II / Glasgow score</li> <li>• ABG required</li> <li>• Calcium</li> <li>• Confirm cause</li> <li>• USS abdo (exclude gallstones in all patients)</li> <li>• Triglycerides</li> <li>• Immunoglobulins</li> </ul>	<ul style="list-style-type: none"> <li>• Supportive management</li> <li>• Lots of IV crystalloids e.g. 1L every 4h (third space sequestration)</li> <li>• Stop causative meds</li> <li>• No antibiotics unless proven infection</li> <li>• Treat cause</li> <li>• ITU may be required</li> </ul>
	Diverticulitis	<ul style="list-style-type: none"> <li>• Elderly</li> <li>• LIP pain</li> <li>• Pyrexia</li> </ul>	<ul style="list-style-type: none"> <li>• Tender LIF</li> <li>• Guarding/local peritonism</li> <li>• PR (confirm no CA/abscess)</li> </ul>	<ul style="list-style-type: none"> <li>• Inflammatory markers: raised</li> <li>• <u>Flexible sigmoidoscopy</u> or <u>CT abdo/pelvis</u></li> </ul>	<ul style="list-style-type: none"> <li>• NBM + IV fluids</li> <li>• Bowel antibiotics (Cef + Met)</li> </ul>
	Renal colic	<ul style="list-style-type: none"> <li>• Spasms of loin to groin pain (excruciating)</li> <li>• Nausea and vomiting</li> <li>• Cannot lie still</li> </ul>	<ul style="list-style-type: none"> <li>• Soft abdomen</li> <li>• May be renal angle tenderness</li> </ul>	<ul style="list-style-type: none"> <li>• Urine dip: microscopic haematuria</li> <li>• <u>KUB X-ray</u></li> <li>• <u>CT KUB</u></li> </ul>	<ul style="list-style-type: none"> <li>• Diclofenac analgesia</li> <li>• Smooth muscle relaxants (nifedipine/tamsulosin)</li> <li>• Antibiotics (e.g. cefuroxime) if infection</li> <li>• Pelvic stone</li> <li>• &lt;2cm – ESWL</li> <li>• &gt;2cm – PCNL</li> <li>• Ureteric stone</li> <li>• &lt;5mm - conservative</li> <li>• &lt;1cm – ESWL</li> <li>• &gt;1cm - ureteroscopy</li> </ul>
	Bowel obstruction	<ul style="list-style-type: none"> <li>• Vomiting (may be faeculent)</li> <li>• Colicky abdominal pain</li> <li>• No bowel motions or flatus</li> </ul>	<ul style="list-style-type: none"> <li>• Distended, tender abdomen</li> <li>• Tinkling bowel sounds</li> </ul>	<ul style="list-style-type: none"> <li>• <u>AXR</u>: distended bowel loops</li> <li>• <u>CT abdo/pelvis</u>: confirm and determine cause</li> </ul>	<ul style="list-style-type: none"> <li>• NBM + IV fluids</li> <li>• Wide-bore NG tube (free drainage)</li> <li>• Laparoscopy/laparotomy depending on cause</li> </ul>
	Acute mesenteric ischaemia	<ul style="list-style-type: none"> <li>• Age &gt;50y</li> <li>• Severe abdominal pain</li> <li>• Diarrhoea</li> <li>• Risk factors: AF, CVS risk factors</li> </ul>	<ul style="list-style-type: none"> <li>• Hypovolaemia → shock</li> <li>• Soft abdomen (pain out of proportion to exam)</li> </ul>	<ul style="list-style-type: none"> <li>• VBG: ↑ lactate</li> <li>• <u>CT abdo/pelvis</u>: ischaemic bowel</li> <li>• <u>Mesenteric angiography</u>: if required</li> </ul>	<ul style="list-style-type: none"> <li>• Aggressive IV fluids</li> <li>• Antibiotics (e.g. gentamicin + metronidazole)</li> <li>• Surgical bowel resection</li> <li>• Heparin may be used</li> </ul>
	Other surgical differentials	Testicular torsion; volvulus; strangulated hernia; Meckel's diverticulum; mesenteric adenitis; adhesions; hepatic abscess; psoas abscess			

<b>Medical</b>	Gastritis/ peptic ulcer	<ul style="list-style-type: none"> <li>Epigastric pain</li> <li>Related to meals (peptic ulcer = during meals; duodenal ulcer = before meals/at night)</li> <li>Risk factors e.g. NSAIDs, alcohol, spicy food</li> </ul>	<ul style="list-style-type: none"> <li>Tender epigastrium</li> <li>Soft abdomen</li> </ul>	<ul style="list-style-type: none"> <li>FBC: may be microcytic anaemia</li> <li>Erect CXR: exclude perforation</li> <li><u>OGD</u>: if severe</li> </ul>	<ul style="list-style-type: none"> <li>PPI (omeprazole PO/ pantoprazole IV)</li> <li>H Pylori eradication (if +ve)</li> </ul>
	Pyelonephritis	<ul style="list-style-type: none"> <li>Fever, chills, rigors</li> <li>Loin pain</li> <li>Urinary frequency and dysuria</li> </ul>	<ul style="list-style-type: none"> <li>Loin tenderness</li> <li>Renal angle tenderness</li> </ul>	<ul style="list-style-type: none"> <li><u>Urine dip + culture</u>: positive leukocytes and nitrites</li> <li>Inflammatory markers: raised</li> </ul>	<ul style="list-style-type: none"> <li>Antibiotics (e.g. ciprofloxacin or cephalosporin)</li> </ul>
	<b>Other medical differentials</b>	Gastroenteritis; constipation; Crohn's disease; ulcerative colitis; MI; pneumonia; sickle cell crisis; DKA; pyelonephritis; IBS; Budd-Chiari syndrome; addisonian crisis; hypercalcaemia; acute intermittent porphyria; hepatitis			

<b>Gynae</b>	Ectopic pregnancy	<ul style="list-style-type: none"> <li>Severe unilateral pelvic pain</li> <li>~6-8 weeks pregnant/not using contraception/missed period</li> <li>Shoulder tip pain</li> <li>May have spotting</li> </ul>	<ul style="list-style-type: none"> <li>Tenderness RIF/LIF</li> <li>Guarding</li> <li>Adnexal tenderness ± mass</li> <li>Cervical excitation</li> </ul>	<ul style="list-style-type: none"> <li><u>Urinary βHCG</u>: +ve</li> <li>Serum βHCG + trend</li> <li><u>Transvaginal USS</u></li> </ul>	<ul style="list-style-type: none"> <li>Laparoscopy/laparotomy (or methotrexate if uncomplicated)</li> <li>Anti-D prophylaxis (if required)</li> </ul>
	Ovarian cyst rupture/ torsion/ haemorrhage	<ul style="list-style-type: none"> <li>Sudden unilateral pelvic pain</li> <li>May be light vaginal bleeding</li> <li>May be fever/vomiting</li> </ul>	<ul style="list-style-type: none"> <li>Tenderness RIF/LIF</li> <li>Guarding</li> <li>Adnexal tenderness ± mass</li> </ul>	<ul style="list-style-type: none"> <li><u>Transvaginal/abdo USS</u></li> <li>Urinary βHCG: r/o ectopic</li> </ul>	<ul style="list-style-type: none"> <li>Laparoscopy/laparotomy</li> </ul>
	Pelvic inflammatory disease	<ul style="list-style-type: none"> <li>Bilateral pelvic pain (gradual onset)</li> <li>Vaginal discharge</li> <li>Dyspareunia and dysmenorrhoea</li> <li>May be post-coital or inter-menstrual bleeding</li> </ul>	<ul style="list-style-type: none"> <li>Suprapubic tenderness</li> <li>Vaginal discharge, cervicitis</li> <li>Bilateral adnexal tenderness</li> <li>Cervical excitation</li> <li>May be fever</li> </ul>	<ul style="list-style-type: none"> <li>Inflammatory markers: raised</li> <li><u>Triple vaginal swabs</u></li> </ul>	<ul style="list-style-type: none"> <li>Broad spectrum antibiotics (e.g. metronidazole + doxycycline + quinolone)</li> </ul>
	<b>Other gynae differentials</b>	Salpingitis; pregnancy; fibroid degeneration; Fitz-Hugh–Curtis syndrome; endometriosis
